

14 questions. Answer what you know.

The proposal and the demo are built on your answers: your business, not an example. Leave what you don't know blank — “I don't know” beats a guess.

01 YOUR BUSINESS

Who you are, and how the work runs day to day

01 Company name and identity

What is the exact registered legal name of the business? And can you send your logo files or brand guidelines, so the first demo carries your identity?

Send the files in the same WhatsApp chat.

02 What you sell

What is your main product or service, and who do you sell to?

Wholesale to businesses (B2B)

Direct to consumers

Both

03 One order, start to finish

Walk us through your main transaction from start to finish: from the moment an order or a customer comes in, to delivery, the invoice and collection. What are the exact steps?

04 The bottleneck

If you could wave a magic wand and remove one manual task that wastes the team's time and they complain about every week — which one would it be?

02 YOUR SYSTEM

The program, where it runs, and what sits under it

05 Your current system

What is the exact name and version of the ERP or management program you run today?

06 Where it runs

Does it run on a physical server in your office, or in the cloud, by subscription?

A server or a PC in the office

Cloud, by subscription

I don't know

07 The database

Do you, or your IT people, know which database engine the system runs on?

MS SQL Server

MySQL

Oracle

Other / I don't know

08 A copy of the database

Once we have signed an NDA, can your system administrator produce a complete raw backup of the database (a .bak, .dat or .sql file)? That is how we map your exact data structure and build the proposal on it.

Yes, they can

I have to ask

No

Whatever you send stays with us and goes to nobody else; if we don't go ahead, it is deleted. We work on the copy; your system is never touched. The NDA reaches you signed before you send a single file.

09 Custom changes

Over the years, have you added custom tables, heavily changed the system's structure, or bolted other programs onto it — anything we need to account for?

03 THE GOAL

Where we want to get to, and what the demo needs

10 The work outside the system

Which important daily tasks do your people have to do outside the main system to get their work done — in Excel, in WhatsApp groups, or on paper?

11 What it has to connect to

Which other programs or systems do we have to connect to for the project to count as a success? For example: accounting programs, shipping companies, suppliers' portals, payment gateways.

12 Products and photographs

So the demo runs on your items, not on samples: can you send 5 to 10 of your top products, with clear photographs, a description of each, and current prices?

Send the files in the same WhatsApp chat.

13 Company details

For the company profile and the email signatures in the system: your official address, your public phone number, and a short paragraph on the company's history.

14 How we know it worked

If this has really worked in its first six months, which number in your business will have clearly improved?
